HearthGlow

A LITTLE GLOW. A PLACE TO UNWIND.

NEEWER LIGHT SYNC / QUICK START

Firelight beyond the screen.

Let HearthGlow extend the flicker and color of your favorite scenes into the space around you.

A SOFTER EVENING, IN FOUR STEPS

Connect your lights.

1. **Power on your NEEWER light**

   Charge or plug in the light and keep it near your device. Close the NEEWER app and any other app controlling the light.

2. **Enable Bluetooth**

   Turn on Bluetooth on your iPhone, iPad, or Mac. Allow HearthGlow Bluetooth access when prompted. No pairing in system Settings is needed.

3. **Find and connect your light**

   Open HearthGlow and its light controls. Search for lights, then select your NEEWER device and enable its connection toggle.

4. **Set the mood**

   Choose a scene and adjust brightness or saturation in HearthGlow. Where available, assign lights to scene zones for different effects.

MAKE IT FEEL LIKE HOME

Let the light bounce.

Aim your light toward a nearby wall or behind your screen for a softer, more natural glow.

IF IT DOESN'T CONNECT

Check power and Bluetooth. Close other light apps; tap Reset Connection and search again.

VALIDATED NEEWER MODELS

RGB color	TL21C / TL97C / VL67C
White light	VL67B (warm-to-cool white; no RGB)

Other Bluetooth NEEWER models may work, but are not validated.
